v. 59, no. 4, p. 394-411.

DESCRIPTORS: *Adsorption, *Thermodynamics,
Surface properties, Heat, Mathematical analysis,
Entropy, Monomolecular films.

Some typical patterns proposed for representing adsorption phenomena in mono- or multimolecular layer are studied, according to whether the molecules are mobile or fixed on the surface of the adsorbent. Methods of calculation from experimental data, fundamental quantities, heats and entropies, in particular, are then indicated. (Author) (See also 63-14741)

DESCRIPTORS: *Adsorption, *Thermodynamics,
Surface properties, Heat, Phase studies, Mathematical
analysis.

The form taken by the fundamental equations of thermo-
dynamics in the presence of adsorption phenomena is
indicated, according to whether or not the properties of
the layer adsorbed itself are to be revealed. The heats
released by adsorption under different operating con-
ditions are then studied, showing in each instance the
role played by surface phenomena proper. (Author)
